

DSPRime™

Software Products and Services

V-TECH offers E2DR®, a sophisticated software product family that enables utility industry companies to implement, track and manage energy efficiency, demand-side management, and renewable energy programs. We have enabled clients, through the use of our E2DR DataStore™ integrated with our DashBoard™, to rapidly develop and manage complex program portfolios. This scalable and customizable solution fully met the needs of utilities and implementation contractors with sophisticated program tracking, analytics and reporting functions.

However, we found there was a need for a simplified version of the DataStore for utility industry companies with smaller programs: One that the user can set up and manage on their own: i.e., a version that can be offered on a self-serve basis allowing users to handle data input as well as track and report one or more programs. V-TECH developed DSPRime™ to meet this need. It features an easy online sign-up process and it requires no upfront licensing fees or long-term recurring licensing costs. Put simply, users get several key features offered in the full DataStore product for a fraction of the price.

Key features offered by DSPRime include:

- No hardware or software investment: just Internet access
- Handle data entry, tracking and reporting for one or more programs
- Enable user to quickly set up program from pre-set program specification template and ability to customize to match to their energy conservation measures
- Robust set of reporting features, including portfolio reports when multiple program data are entered [*See sample snapshot on back*]
- Export Excel extracts of data for further analysis
- Provide pre-formatted screen views for printing and use in other reports
- Has built-in data QC, time-stamped audit trail and regulatory compliance
- Is a consistent data source for Measurement & Verification activities
- Web-hosted solution that is secure, reliable, repeatable and available 24/7
- Easy-to-follow online instructions on how to set up the program, enter data and view reports
- Simple, straightforward pricing: no additional fees based on size of program
- Any data entered into the DSPRime is readily exportable to the full DataStore product

DSPRime is perfect for project managers with relatively small budgets yet interested in a streamlined tool to track, monitor and report on their programs. It's also an ideal option for project managers with complex program requirements – they can use DSPRime to easily manage small programs [such as low income or grant programs] or simply to try out the key features of the E2DR product suite before migrating to the full DataStore.
